CREATIVE at work

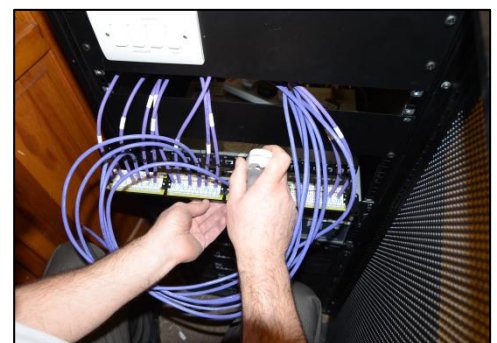

St Ebbes Church, Oxford

A Sound Solution

Amplifier and Audio Processing Rack. Via relay control on the Electrovoice DC-One, the Church speakers can be quickly switched from portrait to landscape orientations.

The new audio system within St Ebbes Church needed to provide excellent clarity and intelligibility for all speech and Worship requirements as well as to provide the ability to switch from portrait to landscape orientations depending on how the Church is being used. CAVS provided a very flexible Electrovoice system featuring ZX1i speakers with matching amplification, active subwoofers and dual DC-One digital processors. The DC-Ones not only provide each speaker with optimised settings including parametric EQ, delay, limiting and compression, they also fully equalise the room acoustics and feature relay switching to allow different speakers to be turned on and off (with different optimisation settings) depending on room configuration.

CAVS also fully networked the Church for future digital ethersound and visual requirements and public internet access.
